How to setup project

1) Tools required:
    a. VS Code: Download and Install from here https://code.visualstudio.com/
   b. NodeJS: Download and install from here https://nodejs.org/en/

2) Download and the save the Source Folder in your working/project directory
3) Open "NodeJS command prompt "

4) Navigate to your Project Directory. (In my case its "C:\xampp\htdocs\BLOCKCHAIN\Jobs-Ethereum-PoC\")

5) Run Command "npm install". It will install all your dependency

6) Run Command "npm run dev". It will setup your local server.

7) It will open the Web Browser and run the service in your browser

8) Kindly check the Metamask account and you are good to go.
